CTA Head and Neck With IV Contrast

Final result

EXISTING CHARGES

Line	Charge	Code	Status	Trigger
SYN-42017	CT angiography head and neck	SYN-CTA-01	Filed - synthetic professional	Imaging result
SYN-42018	CT angiography technical component	SYN-CTA-02	Filed - synthetic technical	Imaging result

DETAILS

Ordering clinician	M. Arden, MD (fictional)
Reading clinician	S. Keene, MD (fictional)
Performed	2026-08-06 14:25
Result priority	Urgent

INDICATION

Sudden severe headache with transient visual disturbance. This scenario and all clinical details are fictional.

FINDINGS

No acute intracranial hemorrhage or large-vessel occlusion. A 5 mm superiorly directed outpouching is described at the left anterior communicating artery region. No prior vascular study is available in this fictional packet.

IMPRESSION

Fictional small intracranial aneurysm for demonstration purposes. Recommend specialist correlation only within this synthetic test scenario.

Lumen Harbor Medical Center (fictional)

Illustrative Vascular Imaging Panel

Demo attachment

DETAILS

Viewer status	Illustrative synthetic raster panel
Source	Generated non-diagnostic visual asset
Reference	CTA Head and Neck synthetic scenario

This is a generated visual texture for document-ingestion testing. It is not source imaging, a DICOM image, or a diagnostic representation.

HANDLING NOTE

The panel deliberately models the presence of an embedded imaging-like raster in a clinical packet while clearly distinguishing it from clinical source images.

DOB: 1979-11-03 Sex: Female MRN: SYN-774201

Lumen Harbor Medical Center (fictional)

Neurovascular Consultation Summary

Final note

DETAILS

Service	Neurovascular Surgery (fictional)
Consult date	2026-08-06
Encounter status	Observation complete
Patient communication	Synthetic example: counseling documented

ASSESSMENT

The patient remained neurologically stable during the fictional observation encounter. The imaging finding, risk discussion, and follow-up language are present only to demonstrate record structure and should not be used as clinical guidance.

PLAN

- Next step: Fictional outpatient specialty review
- Record status: Finalized synthetic note
- Care coordination: Demonstration-only referral workflow

DOCUMENT PROVENANCE

This page uses generic EHR-inspired information architecture: patient banner, final-result status, operational details, and result-care workflow. It does not reproduce a vendor UI, logo, or proprietary template.

Outside Facility Referral Summary

Imported / scanned

DETAILS

Source	Fictional outside clinic fax
Received	2026-08-06 16:11
Source quality	Soft-scanned simulation

REFERRAL STATEMENT

Please review this fictional imaging result and advise whether a nonurgent specialty appointment is appropriate. No real patient information is represented.

MEDICATION AND ALLERGY EXTRACT

Medication: Example antihypertensive listed as current

Allergy: No medication allergies documented in this fictional referral

- Awake, alert, oriented x3. No acute distress.
 - Respirations even and unlabored. Lungs clear bilaterally. ✓
 - Heart rate regular. No murmurs appreciated. ✓
 - Abdomen soft, non-tender. Bowel sounds present.
 - No peripheral edema. Distal pulses 2+ and symmetric.
 - Skin warm and dry. No rashes or lesions noted.
 - Reports mild headache earlier, improved with rest and hydration. ✓
- Plan: continue supportive care, encourage fluids, monitor symptoms. Reassess as needed. →
